# Illumishelf Connection Instructions

Verify the contents of the box. You should have received at minimum:

- (1) Power Supply
- (1) LED Controller
- (1) Remote
- (1) 6.5' Jumper Cable
- Package of Pins
- Mounting Brackets
- 1 Illumishelf

- 1.Verify all of the shelves are working properly before mounting them.
- 2.Plug in the connector from the power supply to the LED Controller
- 3.Connect a 6' jumper cable to the connector on the LED controller with the 4 pin connectors provided. Be sure the white arrows are facing each other.
- 4.Connect the cable to the lighting in the first shelf.
- 5.After you have connected everything, plug the power supply in and your shelf should illuminate. If it doesn't, use the remote control to turn the power on.
- 6.If you are connecting more than one shelf use the jumper cables to connect the first shelf to the second. Continue this for however many shelves you have.
- 7.Once you have verified all shelves are working install the mounting brackets and run your cables either on or inside your drywall.
- 8.When choosing a location for the power supply and controller please keep in mind that the LED Controller operates off of the infrared remote so you must place the controller in a location you have line-of-site to for easy operation.

Any problems or questions please contact us for technical support.
